AN EVENT DRIVEN MODULAR CONTROLLER METHOD AND APPARATUS

ABSTRACT

5

A method and apparatus for a dynamic event driven modular controller apparatus (102) receiving at least one signal (118), having a filter (202) to identify a predetermined portion of the received signal as an event and a controller (110) that executes a user defined action stored in the event action

10 list (210) resulting in the generation of a plurality of metrics. The plurality of metrics are stored in a storage device (112).
